

TABLE PURSUANT TO CT6.41# - SPECIFIC REQUIREMENTS (01/2000)FELLING METHODSCUTTING UNITS

During felling operations all trees must be kept within cutting unit boundary All

Mechanized felling equipment will not be operated on slopes greater than 35%. All

Trees that are too large for mechanical felling equipment will be hand felled.

FELLING EQUIPMENT

Mechanical felling equipment will be limited to a boom shear/saw with a minimum 20-foot reach and a static ground pressure less than 8.5 lbs/sq in. All

Feller/buncher may operate off of approved skid trails under the following conditions: dry, frozen, or snow covered conditions. "Dry" means July through September, or obviously dry in the top 4 inches during other months. "Frozen" means frozen to a depth of 4 inches or more. "Snow covered" means sufficient snow strength and depth to prevent soil disturbance and compaction. All
